

Scanning procedure

Hi, my name is Paprika and I'm going to explain all the phases of your exam. So the machine behind me is a _____ known as a scan or a _____ or a _____.

You or someone close to you is going to have a scan. This film has been prepared to explain the procedure involved in a _____ examination. You will first be welcomed by a medical _____. They will ask you a few questions particularly concerning any _____ you may be taking, any _____ you might have or, if you are a woman, if you are _____.

You will then be taken into the _____ room. A scanner is a _____ that contains an _____ source which turns round your _____ in order to obtain highly detailed _____ of areas your _____ wants to see.

The _____ will ask you to enter the dressing area to undress and put on a hospital _____. Clothing and jewelry interfere with the _____.

Depending on the body area to be examined, one or several radio _____ agents may be administered to enhance organ observation. There are three ways of doing this. Oral, you will be given an aniseed-flavoured _____ to drink in the _____ before the scan, intravenous, the liquid is _____ once you are already on the scanning table. This method frequently provokes hot flushes and leaves a strange taste in the mouth. Recto, an _____ is often administered at the beginning of an abdominal scan once you are on the scanning table.

I will now explain the procedure. So, you have to lie on the table like this with your _____ pointing in this direction and your _____ raised over your head.

Once you are in position, the table slides you into the _____, and the table will also move during the exam, but don't worry, it's normal. The scan begins once all of your questions have been answered.

The technician will go into the next room, sit in front of the scan control and prepare the necessary settings. Thanks to the interphone, the technician can speak with you, for example, to ask you to hold your _____. You may also speak with the technician whenever you wish.

The exam takes about 30 minutes and that's it, it's finished.

Once the _____, if you have one, is removed, you can sit up, but keep your _____ bent for a moment. You can eat and especially drink a lot to eliminate any _____ you were given.

A _____ will analyze your scan _____ within a few days and prepare a _____ for your attending physician.

I hope that I have been clear enough, but please do not hesitate addressing your questions to the medical team and, in any case, everything will be re-explained. Bye-bye.
